| VS Code | NetBeans |

Database

| SQL | Mongo DB |

Work Experience

Web Developer Intern.
Genisup Pvt. Ltd. | January 2020 - February 2020

In this intern I contributed as Web developer. We developed two products.
1. Bulk Sms Sending Web Application on different platforms like emails, local sms, whatsapp messages.The application is designed in Materlize CSS and backened using Django and twillio for API managements.
.2. E-Quatation Generator web application for the car motors showroom.This application is designed using Bootstrap 4 and javascript library and backened is done using django

SDE intern
PythonMates. | February 2020 - April 2020

- Tasked to implement web scraping tool for Discord,which is to later become part of a bigger web scraping SaaS.
- Tasked with learning and deciding on the best tools/libraries to use to implement said web scraping tool
- Implemented tool using Flask, then Express.js and eventually Electron.js after realizing shortcomings with the first two approaches.
- And Designed the UI/UX for the Blockchain project dashboard.
- Appointed as a team leader for the intern team.

Innovate something to solve the real world societal problems.

And sometime Cooking Food

And Playing Criket.

Projects

E-Commerce Application MERN.
Self Project

IAn Ecommerce application with payment gateways integration. Simply for learning purpose. The Application is designed and developed using MERN (Reactjs, Nodejs, Express, MongoDB) technology and integrated stripe payment gateway.

SMART_APPAREL
Hackathon Project

We have seen people working around the hours and this busy schedule they only happen to have a choice of choosing their apparels over the internet, but the drawback is the size of their products might not fit them. We are here with a solution, we call it "SMART APPARELS", having so less time from their busy schedule, they can use their hand gestures to change between products from their hats to their shoes. they can use this project while shopping and save a lot of time without actually changing dresses. We came up with this idea after looking at the real time issues of malls, online shopping and performing some surveys, technology that we propose to use is based on SPARK AR and simple camera and some specific scripts. Bringing this idea we intend to save the users/customers time, as being customer we know how precious time for customer is..

Samarpan Yoga.
Freelancer Project

Simple Website Design and developed Yoga website for end user to check out the classes and the book the yoga class. Front-end : HTML, CSS, Bootstrap 4, Javascript.Backend Services : Python Flask and AJAX.Database : SQLite3And the website is live.
